

About The Company

Worcester NDT offers a mobile testing service. We are able to visit your site, perform the necessary inspections and leave with the minimum of fuss. We offer a fast reliable turn round and our aim is to be with you within 24 hours of your initial contact.

All tests are carried out to B.I.N.D.T. PCN Level 2 Standards. and certification will normally be produced at the end of the job allowing you to despatch goods immediately.

As well as the standard weld and material checks we can also perform thickness checks on pipe work. This will determine the extent of internal corrosion present.

For customers with large quantities of smaller products or batch runs we can perform off site MPI or Dye penetrant bench testing.

With many years experience in NDT we are happy to offer advice on the best form of testing for you.
